

**20-MINUTE WALKTHROUGH**

Show them their own week.

The goal of the demo is not to show every feature. It's to let one person at the agency picture their own Monday inside Bod App, then say yes to a free month.

Before the call

- Ask for two or three of their real client names. Add them to the demo workspace with their own colours.
- Load the demo workspace with a normal-looking week: a few tasks done, one waiting on a client, one due today.
- Check the phone mirrors cleanly on the call. Switch the app to the theme they'll like (dark or light).
- Find out who's on the call: founder, PM, creative or finance. Lead with the part of the app that person lives in.

How to sound

- Talk like a colleague showing a tool you use, not a salesperson. "This is what our team does every morning."
- Ask more than you tell. Every step below has a question. Use it.
- Let Bod Annan land on his own. Don't oversell the character; people smile at him without help.
- Never promise a feature that isn't in the app. If they ask for something new, write it down and say you'll come back.

The flow at a glance

TIME	PART	WHAT IT'S FOR
0-3 min	Open	Their week, in their words
3-6 min	Listen	Where the admin piles up
6-15 min	Show	Six moments in the app
15-18 min	Answer	Their questions
18-20 min	Close	A free month, and a setup call

**6-15 MIN · THE WALKTHROUGH**

Six moments, in this order.

Each moment takes about 90 seconds. Show it, say one line, ask one question, then move on.

MOMENT	WHAT TO SHOW	WHAT TO SAY	ASK THEM
1. Home and weekly win	Open the app on the home screen. Point at the weekly recap card.	"This is the first thing our team sees each week. Bod Annan tells everyone what they shipped."	<i>What would it do for your team to see last week's wins, without anyone writing a report?</i>
2. Focus Queue	Tap into Focus. Show overdue at the top, then today, blocked work tucked away.	"Nobody here plans their day any more. They open this and start at the top."	<i>How does your team decide what to work on first right now?</i>
3. Voice to task	Hold the mic and say a real task using their client's name. Show the draft task.	"Say it the way you'd say it in the office. It fills in who, what and when."	<i>Can you try one? Say a task you'd normally drop in WhatsApp.</i>
4. Approvals	Open the PM approval queue. Approve the task you just made.	"Nothing lands on the board by accident. The PM approves it once."	<i>Who hands out work in your studio today?</i>
5. Follow-up nudge	Open a task waiting on a client. Show the drafted follow-up.	"When a client goes quiet, it writes the nudge for you. You just send it."	<i>How many client follow-ups does your team chase in a week?</i>
6. Standup and billing	Show the standup summary, then the Ready to bill list.	"The standup writes itself, and finished work goes straight to Finance. Nothing sits unbilled."	<i>What happens at month end when you work out what to bill?</i>

**Bod App**

DEMO SCRIPT & TALK TRACK

0–6 MIN · OPEN AND LISTEN

Start with their week, not the app.

Opening line

“Before I show you anything, tell me about last week. What took more time than it should have?”

Questions to find the pain

- Where do briefs arrive today? WhatsApp, email, calls?
- How do you know where a job is without asking someone?
- What happens when a client goes quiet for a few days?
- How long does your standup or status meeting take?
- How do you make sure everything delivered gets billed?
- Have you tried a project tool before? What happened to it?

Write down their exact words. Use them in the walkthrough: “You said briefs get lost in WhatsApp, so watch this.”

15–20 MIN · ANSWER AND CLOSE

Offer the month, book the setup.

The close

“The easiest way to know if this fits is to run your own work through it. The first month is free for up to three people, and we’ll set it up with you. Shall we book a 30-minute setup call this week?”

If they need time

- Send the one-pager and pricing sheet the same day, on WhatsApp.
- Book a follow-up date before you hang up. Don’t leave it open.
- Ask who else needs to see it, and offer a second, shorter demo for them.

After every demo

- Log it in the pipeline tracker with their main pain, in their words.
- Note any feature request, and pass it to the product team.
